Target version:			
Description			
Is it possible to set issue id's for each project. Currently its the issue is for all projects same.			
For example: I have 64 project running on RedMine, When i create the first 100 issue's on project 1 and then i create an issue on project 2 that first issue for project have issue id 101 instead of issue id 1 for project 2. Is there a plugin or something for it ?
