Redmine - Defect #1280

Wikis are viewable for anonymous users on public projects, despite not granting access

2008-05-21 21:53 - Ben Oakes

Status:	Closed		**Start date:**	2008-05-21
Priority:	High		**Due date:**

Category:	Permissions and roles		**Estimated time:**	0.00 hour
Target version:	0.7.2			
Resolution:	Fixed		**Affected version:**	0.7.1

Description

It seems that the access control on wikis does not get respected on public projects. An anonymous user can always view wiki pages if the project is marked public, even if anonymous members have not been granted access to the wikis. This worked correctly in 0.6.4, which we were using previously. We are currently using Redmine 0.7.1.1438 (MySQL).

Steps to reproduce:

1. Make a new project. It must be public and have the wiki module.
2. Add start page for the wiki and add some text to the wiki start page
3. Make sure the permissions for anonymous does not include "View wiki pages"
4. Sign out.
5. Go to the 'Projects' page and click on the project that was created. The wiki tab is visible and the anonymous user can read the contents that were entered previously.

Please note that you may also see tabs for "Issues" and "News" (if you enabled those modules), which **should** show up, as there's not a permission to deny viewing.

Revision 1443 - 2008-05-22 20:08 - Jean-Philippe Lang

Fixed: non member or anonymous permissions change is effective only after an application restart (#1280).

History

#1 - 2008-05-22 20:08 - Jean-Philippe Lang

- Status changed from New to Closed

- Target version set to 0.7.2

- Resolution set to Fixed

Actually, this bug is not specific to the wiki. Updating 'Non member' or 'Anonymous' permissions needs an application restart (these permissions were unintentionaly cached).
Problem is fixed in r1143. If you don't want to upgrade, you can just restart the app to solve this problem.
