Description

Hi there,

maybe this could be useful for redmine projects too.

Some kind of graphs could be useful for project managers or maybe for the public too.

Gitlab and Github have some integration of them. Personally those punchchart and the code frequency is very useful.
https://github.com/FooBarWidget/passenger/graphs

This would be some improvements for companies or some private projects, which can't use systems like github. This would help redmine too. With some further codemanagement integrations, redmine can compete with some other open source systems, which provide repository management.

Best regards,
Daniel
