Links are dead, author seems inactive (last connection: 2011-03-18).

It is affecting the links to public SCM's and ITS's. In case of this blog plugin, the link in the name is pointing to the correct forum-thread, which eventually leads to a fork that is 2.0.x compatible ([https://github.com/ichizok/redmine\\_blogs/network](https://github.com/ichizok/redmine_blogs/network)).

I did some searching and didn't find any clear references to [Plugin\\_List](#). Using which way did you come to that plugin entry in the historic list?

I'd rather keep the page as it is currently for future referencing purposes. Maybe it's worth to extend the text in the description to make it more obvious that it is a frozen page after the coming of the new plugins directory (<http://www.redmine.org/plugins>)?, Maybe even using some red colored warning box?

What do others think?

##### #2 - 2013-01-14 01:36 - Toshi MARUYAMA

- Description updated

Fix description typo.

##### #3 - 2013-01-14 08:43 - Jean-Philippe Lang

- Status changed from New to Closed

I'm closing it. The [Plugin\\_List](#) was replaced by the plugin directory time ago. It's not supposed to be updated anymore and may be removed in the future.

Just FYI, the link pointing to the [Plugin\\_List](#) is in [#1237](#) Note 4.

If the page isn't referenced it's IMHO OK to let it stay as it is.
