Description

I have test firefox3, IE6 and IE7.
In the new issue page, adding ASCII new issue type is correct using all of the three browser.

But when add non-ASCII new issue type, only firefox works fine. IE6 will add mess-up characters to issue types and IE7 will fail to add the new type.

I have resolved this problem by add encodeURIComponent in the promptToRemote function in application.js.
And now both ASCII and non-ASCII new issue type can be added successfully.
