Description	
<p>The view that lists all issues - maybe with some redmine, global or user defined filters - is great to get a good overview about the current tasks.</p> <p>if the screen's display settings are wide (e.g. 1920 pixel) you can see much information. On screens that are not that wide information will get lost.</p> <p>Of course you cannot expand the screen of the user ;-) but one thing might be changed:</p> <p>In your template, there is always on the right side the part that allows filtering (the grey block) and this part - minimizes the usable screen a lot.</p> <p>Maybe you can include a button "hide" or an image with an arrow that points to the right side "=>" that allows to minimize this block? When minimized, a button "show" or "<=" could be shown and the main area can grow and more information can be displayed / read there...</p> <p>I tried to visualize my idea - please take a look at the attached image.</p>
