Description I just wrote a script to collect projects via Rest-API and recognized that i cant filter projects with my URL. If i click "show closed projects" in my browser it will redirect me to a page like: /redmine/projects?closed=1 But using "closed" with json doesnt seem to work: /redmine/projects.json?closed=1 Would be great if you could add more filters for projects, like "closed" I hope this feature is not included yet and that i am not doing something wrong here ... I am using version 2.1.2.stable

One of our ([Planio](#)) clients ran into this same issue today, it would be great to at least have the status of the project (open or closed) as part of the API response.

+1 Not having this features requires me to fetch project details for every issue, and my query just to get the issues already takes ~1 second.
