Description

The wiki syntax commit:repo_a used to link hash-named changesets doesn't work if repo identifier has underscore symbol.

Maybe in this code https://github.com/redmine/redmine/blob/master/app/helpers/application_helper.rb#L751 used wrong regular expression.

```
        when 'commit', 'source', 'export'
          if project
            repository = nil
            if name =~ %r{^(([a-z0-9\-]+)\|)(.+)$}
              repo_prefix, repo_identifier, name = $1, $2, $3
              repository = project.repositories.detect {|repo| repo.identifier ==
repo_identifier}
            else
              repository = project.repository
            end
```

Confirmed because I've observed the same behavior on my instance a week or two ago, but didn't dig into it.
