

Redmine - Defect #12981

Wiki self-link with anchor looks strange in "preview" section.

2013-01-25 12:26 - Vadim Pushtaev

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Text formatting	Estimated time:	0.00 hour
Target version:		Affected version:	2.2.2
Resolution:	Wont fix		
Description			
<p>My page named Wiki contains link <code>[[Wiki#Section]]</code>. It produces this HTML: <code>Wiki</code> that looks great on the page, but look strange in preview section, while editing this page. In that case it directs me to <code>/projects/project1/wiki/Wiki/edit#Section</code> that is obviously wrong.</p> <p>Self-link is considered like special case by this piece of code (<code>app/helpers/application_helper.rb</code>):</p> <pre>def parse_wiki_links # ... url = if anchor.present? && wiki_page.present? && (obj.is_a?(WikiContent) obj.is_a?(WikiContent ::Version)) && obj.page == wiki_page "##{anchor}" else </pre> <p>As you can see, <code>obj.page == wiki_page</code> is not enough to make link local.</p>

Yes and no, links generated in preview are not really supposed to be functional so the case is not taken into account.

Is it really necessary to make link local? I mean, my browser doesn't refresh page anyway, even if full link to the same page is provided.

#5 - 2013-01-27 14:54 - Etienne Massip

ItLs useful for HTML export.

#6 - 2013-11-14 08:29 - Vadim Pushtaev

I believe the appropriate strategy here is to never use local links in preview sections, it's pointless.

`app/views/common/_preview.html.erb`:

```
-<%= textilizable @text, :attachments => @attachments, :object => @previewed %>
+<%= textilizable @text, :attachments => @attachments, :object => @previewed, :wiki_links => :full %>
```

Patch with tests included.

#7 - 2013-11-14 08:29 - Vadim Pushtaev

- Status changed from New to Resolved

#8 - 2021-06-12 10:38 - Go MAEDA

- Status changed from Resolved to Closed

- Resolution set to Wont fix

Please use `[[#Section]]` instead of `[[Wiki#Section]]` when you want to make a link to an anchor on the current page. The syntax is allowed since Redmine 4.0.0 ([#16313](#)). It should work as you expect.
