

Redmine - Defect #13

Files in repository have Windows-style line endings

2007-03-12 12:20 - Jonathan Dance

Status: Closed	Start date:
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category:	Estimated time: 0.00 hour
Target version:	Affected version:
Resolution:	
Description	
<p>All files in the repository have Windows-style line endings (\r\n) - they should have svn:eol-style set to "native" so that this is not an issue for those users who try to view the source on other operating systems.</p> <p>The easy way to apply this change is as such:</p> <pre>/redmine \$ find . grep rb\$ xargs svn propset svn:eol-style native /redmine \$ find . grep rhtml\$ xargs svn propset svn:eol-style native</pre>	

History

#1 - 2007-04-18 17:16 - Pavol Murin

I second this - please, it makes the default svn diff unusable,
I always have to use external diff when creating patches.
muro

#2 - 2007-03-13 22:42 - Chris Grant

True ... submitted a patch the other day and it was a bit longer
than needed because of the line endings.

I've got the following sitting in my ~/.subversion/config file
... it covers a lot of bases:

[miscellany]

enable-auto-props = yes

[auto-props]

#3 - 2007-03-13 21:27 - Jonathan Dance

Yes, as long as it's not a binary file. :)

The main reason I mentioned rb and rhtml files is for submitting patches, which are most likely to these files.

#4 - 2007-03-13 18:55 - Chris Grant

This should really be set on most (if not all) of the files, not just .rb and .rhtml files.

#5 - 2008-02-05 19:54 - Thomas Lecavelier

Hum... This issue seems to be closed, since I hadn't seen a ^M char in my vim since a long time ago. Somebody still have EOL problems with redmine sources?

#6 - 2008-02-05 20:57 - Jean-Philippe Lang

- Status changed from New to Closed

You're right.

There may be some migrations with such eol, but that's not the kind of files that should be patched so often.
