Description

We make heavily use of the "#<my issueid>" macro, but are also copying manually the topic right after the autmtic link.
This need more effort (serach the issue, copy topic, pastse topic well formated right behind the [#123](#)) and also has the problem that this topic name don't get updated if i change the topic name in corresponding issue.

I know that the issue topic is shown as popup if i move cursor over the link, but if you make listing with several issues in contect of any wiki site or on version its needed tpo see this all issues topic names immidiately without cursor moving and remembering (i can't remember more than 4 items at a time ;( )

There are plugin like [redmine wiki extensions](#) which offer a macro to be able to include issue queries as well formated table, however this is a work around which needs to "tag" issues to be selectable.

The new marco can be an extension of the existing one, e.g

#<id># shows id as link
##<id> shows id with topic as link
#<id># shows topic as link

Link text suggested above can be displayed in the latest Redmine. Redmiinie 4.0.0 and 4.1.0 have introduced new syntax for linking to issues:

- ##123: link to an issue with tracker name, id, and subject ([#29488](#))
- {{issue(123, project=true/false, tracker=true/false, subject=true/false)}}: Inserts a link to an issue with flexible text ([#29489](#))
