

Redmine - Feature #13191

Custom query: When an issue was applied to version x?

Target version:			
Resolution:			
Description On the roadmap page I can't recognize which issues were added in the last days. I'd like to have a possibility to sort/query the date when a issue was applied to the version x. Now I see 68 issues for redmine 2.3 and I never know which issue was added the last days.

- Status changed from New to Resolved

Ok, I'm using now the column "version". For the last days that's sufficient.
