

## Redmine - Feature #13233

### Possibility to sort custom queries by extra database field or at least ID

**Description**

It would be fine being able to sort the custom queries.  
I would like to uses captions for a group of queries without reusing the same string over and over again:

Expl.

```
Tickets for me
-----
in short
with extra Info
```

Right now these queries are sorted by name which isn't really helpful.  
Different possibilities would be fine:

1. Selecting a sort mechanism in Setting (Sort by name, sort by ID, sort by extra db field, ...)
2. Simply sorting by ID
3. sorting by a DB field - maybe sortOrder(Integer)

Thanks for the help

#### History

Maybe grouped custom queries instead of sorting by a special ID?

##### #2 - 2013-02-21 09:51 - Christian Ziegelt

If grouping is possible? I did not find this function.  
But inside the groups I would like to sort, too :-)

In fact there should be a line of code which gathers the queries from DB - I could do my sorting manually there :-). If I knew where to do it.
