Description

Hi,

CentOS 6.3 throwing this error with current RubyGems.

This could be fixed by using source: https://rubygems.org/ instead of http://rubygems.org in Gemfile.

    bundle update
    The source :rubygems is deprecated because HTTP requests are insecure.
    Please change your source to 'https://rubygems.org' if > possible, or 'http://rubygems.org' if not.
    Fetching gem metadata from http://rubygems.org/........

Ah sorry. haven't seen this in the last days in the activities.

Well I would appreciate if this could get inside 2.3. :-)
