How you insert html-Tags? As far I know Redmine treats html-tags like normal text by default. Do you use a plugin for that?

Redmine tcpdf library support any html.(? I thought so.)
I tested this feature but failed. (bug?)
I think this is rather a new feature, to use tcpdf with any html. (or?)
Yes, i use external plugin to test tcpdf, ckeditor. (not suitable for the task?)

Without ckeditor, with custom development, is tcpdf able to convert any html to pdf?

thank you for your time

#3 - 2013-02-25 16:43 - Filou Centrinov

Yes, tcpdf is able to interprets HTML, but redmine won't print interpreted html-Tags, because HTML-tags are handled as text.
I you don't care about how it's printed, you can use a macro to [insert HTML](#).

#4 - 2021-06-27 07:51 - Go MAEDA

- Status changed from New to Closed
- Resolution set to Wont fix

The TCPDF based PDF library was extracted as [rbpdf_gem](#) in Redmine 2.6.0 ([#17570](#)) and the current versions of Redmine don't include a library for generating PDF.

If you find problems in the gem that cannot be reproduced with plain Redmine, please report the issue to the rbpdf project.
