Resolution:	Fixed		**Affected version:**	

Description

On the Repository page I click [+] near the trunk folder and while loading is processing I click [+] near branches. After both loadings are finished I have this:

```
branches
|-branch1
|-branch2
|-file1
`-file2
tags
trunk
```

instead of this:

```
branches
|-branch1
`-branch2
tags
trunk
|-file1
`-file2
```

As you can see, loading result appeared in the last chosen folder, not in the appropriate one.

Looks like we just use global variable instead of local one:

```
 function scmEntryClick(id, url) {
−    el = $('#'+id);
+    var el = $('#'+id);
     if (el.hasClass('open')) {
         collapseScmEntry(id);
         el.addClass('collapsed');
```

Patch included.
