

Redmine - Defect #13424

Demo instance

2013-03-11 08:16 - Palle Plut

Status:	Closed	Start date:	
Priority:	High	Due date:	
Assignee:		% Done:	0%
Category:	Website (redmine.org)	Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:	Fixed		
Description Hello! I have got an account in the Demo environment to check if RedMine will do the trick for our organisation. But the problem is that there are a lot of Internal Errors so I cant get to the test... For example when I try to: - Set an Issue priority in the admin - Internal error - View my page - Internal error - Click "Activity" in a project - Internal error - Click "Issues" in a project - 500 An error occurred while... - Click "Gantt" in a project - 500 An error occurred while... - Click "Calendar" in a project - 500 An error occurred while... There might be more but this should be enough to see the problem... Is it anyone who can give me some hints of what can cause this? Without solving this in the Demo environment I cant go further with RedMine and I think, from what I have read, that RedMine really will do it for us. I tried to open a new account but it did not help, it is the same... It is not possible to load the default configuration (See attached file). Regards Palle
