Target version:			
Resolution:	Invalid		
Description			
<p>So far only foobar2000 is only open source media player that supports playback of either Dvd-audio and/or SACD.</p> <p>See if it is possible to port this plugin(link below)to be used with xbmc4xbox v3.2.1, <i>if</i> the code is GPL compliant.</p> <p>http://dvdadecoder.sourceforge.net/</p> <p>Code needs to be implemented into DVDPlayer.(if need be, create a new media player "HRAudio" or Hi-Resolution audio to be used along side PAMPlayer) Xbox may not have enough memory to patch this code into DVDPlayer.</p> <p>I think the feature my require an on off ticker displayed in system\video\playback</p> <p>Needs to open the "audio_ts" folder on dvd audio discs.</p> <p>If possible allow both internal decoding of the audio stream, and S/PDIF datastream pass-through for bitstream decoding via home AVR.(xbox may not have enough resources to allow internal decoding to be sent via RCA analogue out)</p> <p>Test with softmodded xbox to ensure portability.</p> <p>Probably needs to support SACD playback too.</p>
