

## Redmine - Patch #13498

### Better validation for identifier length

2013-03-17 10:02 - Daniel Felix

This could be clearer with minimum and maximum.	
Example:	
<code>validates_length_of :identifier, :minimum =&gt; 1, :maximum =&gt; 100, :allow_blank =&gt; false</code>

This could be clearer with minimum and maximum.

The current code is specifically done for easy changing the max. identifier length. See [#6446#note-12](#). I'd suggest to keep it like it is now.

##### #2 - 2013-03-18 13:06 - Daniel Felix

Ah okay.

But we'll the `:maximum` would achieve the same thing? There could be a reference to the variable too. :-)  
Doesn't it?

What about the allow blank option?

##### #3 - 2014-01-12 12:08 - Jean-Philippe Lang

- Status changed from New to Closed

There's a min and max in the current implementation. I don't know how it was when this patch was submitted, please reopen if needed.
