Description Have only the gravatar.com as an avatar source is very limited. It would be very cool if Redmine supports <ul style="list-style-type: none">- Local storage So users can upload their pictures directly to Redmine- Ldap mapped pictures So users can use images already used in their Ldaps servers There are two plugins that do this but they aren't updated anymore <ul style="list-style-type: none">- http://www.redmine.org/plugins/redmine_gemavatar- http://www.redmine.org/plugins/redmine_local_avatars

Actually the most useful thing would be to have the *local avatars*. There existed a plugin [Local Avatar](#) but it is no longer under active development - and then there are some half a dozen forks in git hub, not sure which one to follow.

Never the less, I think local avatar or any thing through auth source (LDAP/AD) should be the ideal choice.

Feature #12197 already asks for built-in Local Avatar support.

Possibly change this to request built-in support for LDAP Avatar?
