

Redmine - Patch #13545

Workflow permissions are broken if user has multiple roles in project

2013-03-21 14:51 - Alexander Kriventsov

Status:	Needs feedback	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Issues workflow	Estimated time:	0.00 hour
Target version:			
Description			
If user has multiple roles in project workflow permissions don't work. It works in two cases:			
1. User has one role			
2. User has two roles with the same workflow permissions			

History

#1 - 2013-03-21 17:57 - Daniel Felix

- Category set to Issues workflow

- Status changed from New to Needs feedback

Please describe, what you mean with "don't work".

Can you give some testcase? This would help us to test what your talking about. :-)

- File bad.png added

I will try, but my English is not so good...

I have two roles R1 and R2.

I have for R1 and tracker "Bug" start date is required for state "New".

When I apply for user "test" role R1 everything are working.

But when I add for user "test" role R2 in the same project permissions are not working.

Please take a look in attachments.

I figured by try an error what would be the ultimate behavior of the particular field when multiple roles are at play:

1. Required: the field will be FORCED to be required only if ALL ROLES requires it.
2. Read-only: the field will be FORCED to be read only if ALL ROLES makes it read-only.

If the field is NOT REQUIRED for any role - (e.g. as reporter role don't have to fill target-version) it will not force you to be REQUIRED.

If the field is NOT READ_ONLY for any role - (e.g. as a manager role I can see the 'Resolution' and update it) it will not force you to be READ_ONLY.

So in general multiple roles makes it 'more permissive'.
