Description			
It would be useful to have url tekst when using Redmine internal links such as #124-6 .			
For example:			
<code>"Note from Foo":#124-6</code>			
<code>"Revision that fixes the bug":r758</code>			
Related issues:			
Is duplicate of Redmine - Feature #10248: Specific text instead of addresses ... New

This works exactly as you are pointing out. Check this out :

```
#7577-6  
r11443
```

[#7577-6](#) -> points to Note 6
[r11443](#) -> points to repository

Refer to [Text Formatting Guide](#) for more details.

- Category set to Text formatting

I think Miodrag is talking about changing the link label.
