Redmine - Patch #13658
include "In-Reply-To" field to aid email threading for some clients
2013-04-01 20:24 - Robert Hailey

Description
Patch was made against 1.4.5, but will most likely apply to the 2.x line as well.

Can this get merged if it works? #10888 didn't do much to help GMail's threading. You still get entirely new threads when the status of a ticket changes.

Attempting to attach patch, but I keep getting marked as spam

#5 - 2016-07-27 20:50 - Mark Felder
This patch does the following:

- Removes Tracker Name and Issue Status from the Subject.
  - This does not belong in the subject. It's repeated in the email already.
- Adds an X-Redmine-Issue-Tracker header to the email
  - I'm sure someone wants to filter their Redmine bugs by Tracker/classification. That's quite reasonable, but a header is a better place for this data.
- Adds an In-Reply-To header in addition to the References header
  - GMail respects this as do many other MUAs.

2020-04-16
Here's the rest of my message that was curiously getting marked as spam:

GMail threads messages by Subject and In-Reply-To. Other MUAs like Mutt have a more sophisticated algorithm for threading emails, but I do not believe this should be considered a bug or deficiency on GMail's part. Simply put, data does not belong in email Subjects. The only thing that should change is a prefix of Re:, Fwd:, etc. Anything else is a gross violation of email and internet etiquette.

In conclusion:

There are people out there that get overwhelmed by a giant sprawl on emails in their Inbox. You're making Redmine a better experience for them, too.

#9 - 2019-02-19 23:28 - Marius BALTEANU

I've attached a patch to #13111 that fixes the threading issues on Gmail and Office 365.
