Description

On some pages, like **Home** or **My page** or plugin using main menu entries the project menu is empty but the div html is still present.

It's a problem when you a background image in CSS, because you see the background image without the menu items. Also its a problem if you use conctect menu slider as done in plugin [redmine sidebar hide](#) where additional space is made availaibe if collapsed

Could you remove this div or add a CSS class to identify an empty menu so i am able to unset css main.margin-left property, for view here no project context and aka no project menu entries are available.

The fix [#3259](#) doesn't fix the problem, because i still have empty "main-menu" divs in my rendered site

```
<div id="main-menu">  
  
</div>
```

I cannot find a blank div.main-menu in Home and My page.

Do you still experience the issue in the current versions of Redmine?
