

Redmine - Feature #13797

per tracker configurable default status and better usability for ui

Resolution:	Duplicate		
Description <p>For naming reasons e.g a scrum request request tracker shall be able to have different start/default status name than a feature or bug tracker. Another reason is that if you model a workflow that starts in redmine in the middle of a bigger workflow which has pre or post process outside of redmine (e.g. automatic issue import from enterprise first level support system like otrs) the start/default state for the issue in redmine could be named "in progress". But a bug tracker still shall be able to use status "new" as default.</p> <p>At the moment you can configure the possible start state for status transition in the issue status application admin settings. Strange is that its a checkbox you check once the old default status setting on another status gets overridden. This behaviour feels very strange as checkboxes normally allow multiselect and shall be used on the same view.</p> <p>If its's a choice between one status or another to be default globally this gui feels wrong to anyway.</p> <p>But however thsi feature wants a default status per tracker and would solve the wired gui problem along.</p> <p>If there is exactly one default (start) status for each tracker this "default status settings" have to be placed in the admin tracker configuration. There shall be a dropdwon "default (start) status" on tracker edit form which shows all status available so far, except these have flag "Issue closed" (end state).</p> <p>Then you can choose the default status for this tracker.</p>
