Description

I have a user that wants to be notified when a specific folder in the SVN repository tree by ATOM feeds.
When we try to use it by Redmine we realized that the ATOM feed don't respect the repository folder and show all repository revisions, but the html page of the same shows only the revisions that applies to the selected repository folder.
Looking deeper in the html page source there are 2 links to the rss resource.
One link in the <head> section, that have the path parameter

```
    <link href="http://server/redmine/projects/xx/repository/revisions.atom?key=xxxxxxxxxxxxxxxxx
xxxxxxx&amp;path=Folder1%2Ffolser2" rel="alternate" title="ATOM" type="application/atom+xml" />
```

Second link in the page footer ">Also available in: ", that don't have the path as a parameter

```
/redmine/projects/xx/repository/revisions.atom?key=xxxxxxxxxxxxxxxxxxxxxxxxxxx
```

However the two links don't work as expected, ie, show in ATOM XML only the SVN revisions that changed (where applied to) the selected folder

My Environment:
Redmine version   2.2.4.stable
Ruby version   1.8.7 (i586-linux)
Rails version   3.2.13
Environment   production
Database adapter   MySQL
SCM   Subersion 1.7.9-3490.107
