

Redmine - Defect #13861

setting\_multiselect function returns HTML escaped code

2013-04-24 11:19 - Nils Linde

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Administration	Estimated time:	0.00 hour
Target version:		Affected version:	1.0.1
Resolution:			
<p><b>Description</b></p> <p>I installed a Redmine through Debian package and it accoured, that many settings inside "Settings" section are unavilable - they were HTML inputs code, but with special chars escaped. As I don't know ruby very much, I used workaround, to deal with that bug:</p> <ol style="list-style-type: none"><li>1. Open file \usr\share\redmine\app\helpers\settings_helper.rb</li><li>2. Prepend require 'cgi'</li><li>3. Search for def setting_multiselect() (line 39 in my case) and encase last part inside CGI.unescapeHTML() function like this:</li></ol> <pre>def setting_multiselect(setting, choices, options={})   setting_values = Setting.send(setting)   setting_values = [] unless setting_values.is_a?(Array)    CGI.unescapeHTML(setting_label(setting, options) +     hidden_field_tag("settings[#{setting}][[]", ' ') +     choices.collect do  choice        text, value = (choice.is_a?(Array) ? choice : [choice, choice])       content_tag('label',         check_box_tag("settings[#{setting}][[]", value, Setting.send(setting).include?(value)) + text.to_s,         :class =&gt; 'block'       )     end.join) end</pre> <p>I dunno why that function outputs html escaped string, but my workaround currently works, but I'm sure, there is deeper problem. Sorry, I currently have no resources to write down problem reproduction guide.</p> <p>Debian Linux 2.6.32-5-amd64 x86_64 GNU/Linux mysql Ver 14.14 Distrib 5.1.66, for debian-linux-gnu (x86_64) using readline 6.1 ruby 1.8.7 (2010-08-16 patchlevel 302) [x86_64-linux] Rails 2.3.5</p>
