

Redmine - Defect #13925

Repository password stored in clear text in DB

2013-05-01 20:47 - Peter Berkman

Status:	Closed	Start date:	
Priority:	Low	Due date:	
Assignee:		% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:		Affected version:	2.2.4
Resolution:	Invalid		
Description			
<p>I use SVN and enabled a Repository in one of my projects. Everything works GREAT!!!</p> <p>So, this is just a "nit". Other passwords that Redmine stores in the DB are encrypted/mangled however not the Repository user password.</p> <p>within the "repositories" table, column "password" is stored in plain text.</p> <p>I think this should be encrypted/mangled like the others.</p>			

History

#1 - 2013-05-01 23:40 - Jean-Philippe Lang

- Status changed from New to Closed
- Resolution set to Invalid

Unlike user passwords, repository passwords can't be hashed. You can turn on repository password encryption by setting a secret key in your configuration file (config/configuration.yml). Please read [source:/tags/2.3.0/config/configuration.yml.example#L142](#) carefully.
