REST API should return user.status

Description

Currently, the REST API /users [1] does not return the status of the requested user.

As I needed this information, I made a tiny modification to show.api.rsb.

Find attached a patch which returns the user.status to the caller, iff the caller is either an admin user or the user who is being returned.

- Target version set to 2.4.0

As discussed on IRC, nice addition. Added in r11790, it will be in version:2.4.0.

I didn't add the status for User.current : if he can make the request, his status is probably "active" ;)

Thanks
