Target version:	2.4.0			
Resolution:	Fixed			

Description

Hi there,
 	
this is a small patch, which should provide the possibility to configure the OpenIdAuthentication.store.
 	
This throws many warnings and spams the log-file on each start.
Message:
 	
    OpenIdAuthentication.store is nil. Using in-memory store.
 	
There is also a discussion about this here: http://www.redmine.org/boards/1/topics/35523?r=37706#message-37706
 	
About the Patch:
 	
  1. Added a new initializer which initialize the Store with a environment setting, if this isn't preserved, he loads a default value.
  2. Added two demo configurations to the environments production and development
 	
Best regards,
Daniel
