Description	
<p>Hello,</p> <p>We have 200+ projects in our redmine and enabling a new module per-project is quite cumbersome.</p> <p>It could be great to configure in a hierarchical way, with settings override at project level, or at least select a group of projects and apply a setting to them.</p> <p>Maybe related to #4015.</p> <p>Regards.</p>
