Description In my firm we are evaluating redmine for use against a pre-existing CVS server. We use branching and tagging very intensely. Is planned to give support for browse among tags and branches in a CVS repository?

I'm working on a patch for this. I've already got branch/tag browsing working for git and mercurial repositories. More to come soon, hopefully. See [#1406](#) for more information.

The repository browsers are one of the great things about Redmine. I'm stuck with supporting CVS repositories but I very much like the Redmine CVS integration, the aggregation of file revisions into changesets, etc.

However, it would definitely help to be able to see CVS tag and branch names in the browser, and preferably to limit the view to a particular branch or tag.

Is anyone still working on this?

How are things going on CSV branches browsing?

+1

Could be nice for both tags and branches
