

Redmine - Defect #14141

Error when loading default data to SQL

2013-05-24 13:48 - Andrew Dugrenier

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Database	Estimated time:	0.00 hour
Target version:		Affected version:	2.3.1
Resolution:	Invalid		
Description			
<p>I'm Running on a Windows Server. Redmine V2.3.1 Ruby 1.8.7 MS SQL Server 2008R2 everything seems to be installing OK. after running rake db:migrate, I ran rake redmine:load_default_data I received the error message: Error: TinyTds::Error: Invalid column name 'builtin'. EXEC sp_executesql N'SELECT TOP (1) 1 AS one FROM [roles] WHERE [roles].[builtin] = 0' default configuration data not loaded.</p>

Did you run db:migrate without error?
Any Plugins installed?

#2 - 2013-05-24 14:05 - Daniel Felix

- Priority changed from High to Normal

#3 - 2013-05-24 14:11 - Andrew Dugrenier

Yes, migrate ran without error.
I followed the installation specified and everything ran ok up to the default data install.

#4 - 2013-05-24 14:11 - Andrew Dugrenier

No plug-ins.

#5 - 2013-06-01 10:52 - Jean-Philippe Lang

Please, give the full output of rake redmine:load_default_data --trace

#6 - 2013-06-01 10:52 - Jean-Philippe Lang

- Status changed from New to Needs feedback

#7 - 2013-06-03 17:04 - Andrew Dugrenier

- File production.log added
- File development.log added

log files attached.

OK,
I loaded a different computer with the windows version and got redmine 2.3.1-1 running. The database initialized OK.
On the old virtual machine version 1.3.2-0 I backed up the mysql database, copied all the apps/redmine/files files.
On the new machine with 2.3.1-1 I used the PHPMyAdmin to import the sql data to the bitnami_redmine database. I placed the copied redmine files in the apps/redmine/htdocs/files folder.
Now I can see my projects, but the files, tasks and calander etc do not work.
Can anyone help?

That's not the right way to do this:

- copy your old DB to new Redmine instance
- upgrade your new DB using rake db:migrate RAILS_ENV=production

If you create a new DB then import old data you'll miss some of the DB upgrade with migration, specifically the one concerning data.

Please read [RedmineUpgrade](#).

#10 - 2013-07-16 15:44 - Andrew Dugrenier

The upgrade document concerns upgrading on the current machine.
In my case I have 2 computers:
One is running a Virtual Machine version Redmine 1.2.3-0 with an Ubanutu op system.
The second is a Windows op system with a Windows install of Redmine 2.3.1-1

Copying the redmine files is no problem, but will the migrate be the same? How would it know where to get the data from? I backed up the mysql database to a backup.sql file.

Thanks,
Andy
