

## Redmine - Defect #1416

### Inline code with less-than/greater-than produces @lt; and @gt; respectively

2008-06-10 08:50 - Anonymous

<b>Status:</b>	Closed	<b>Start date:</b>	2008-06-10

<b>Description</b> I tried to put the following in inline code  <Location /redmine>  in a forum message and the result was <Location /redmine> e.g. <Location /redmine>  Is this expected? Looks like a bug to me.  <ul style="list-style-type: none"><li>• Redmine-0.7.1</li><li>• Rails-2.0.2</li><li>• Ruby-1.8.6</li></ul>

#### Associated revisions

##### Revision 3567 - 2010-03-12 16:12 - Jean-Philippe Lang

Fixed: inline code with less-than/greater-than produces @lt; and @gt; (#1416).

#### History

##### #1 - 2008-08-20 18:58 - Brian Ericson

Ran into the same thing. Simple workaround is to stop the inline, add the </>, and continue the inline (ending it at the next </> and resuming it afterward).

(ampersand)abc <123> xyz(ampersand) results in abc <123> xyz

(ampersand)abc(ampersand) <(ampersand)123(ampersand)> (ampersand) xyz(ampersand) gives you abc <123> xyz, which is what you want.

##### #2 - 2008-08-21 05:22 - Brian Ericson

Sorry -- "@" is not an (ampersand). Also, "add the ," should be "add the < or > characters," (if you follow a less than immediately by a greater than, redmine appears to not show it).

##### #3 - 2009-03-22 11:57 - Jean-Baptiste Barth

- File redcloth\_arobas.diff added

- Affected version (unused) deleted (0.7.1)

- Affected version deleted (0.7.1)

The problem is redcloth parses twice these characters ; the first time it escapes all "<" and ">", no problem about that, but the second it traduces resulting "&lt;" to "&amp;lt;" (and so on), which is incorrect. It seems to me it's a redcloth problem, so I patched recloth lib to avoid second parsing. See attachment and let me know your opinion about that.

##### #4 - 2010-02-10 21:34 - Jean-Philippe Lang

- Category changed from Wiki to Text formatting

#5 - 2010-02-17 13:07 - Anthony Groyer

This works fine for inline code with @ separators. For

separators, this does not work.  
Why not considering moving to RedCloth 4 that apparently fixes these 2 issues ?

#6 - 2010-02-17 13:09 - Anthony Groyer

This works fine for inline code with separators. For <pre> separators, this does not work.  
Why not considering moving to RedCloth 4 that apparently fixes these 2 issues ?

#7 - 2010-02-26 18:09 - Anthony Groyer

- File redcloth3\_3.0.4\_escape.diff added

In fact, the bug I described (with pre separators) appears when I use coderay-0.9.1 (for java syntax coloration) that I have copied manually in redmine/vendor/plugins.  
I attached a patch of redcloth3.rb that seems to work.

#8 - 2010-03-12 11:49 - Anthony Groyer

I attached a patch of redcloth3.rb that seems to work.

This patch solves the issue when the < and > are between a

<pre><code class="..."> </code>

tags but create a bug when they are used in

<pre> </pre>

tags.

#9 - 2010-03-12 16:13 - Jean-Philippe Lang

- Subject changed from Include code and less-than/greater-than produces @lt; and @gt; respectively to Inline code with less-than/greater-than produces @lt; and @gt; respectively
- Status changed from New to Closed
- Target version set to 1.0.0 (RC)
- Resolution set to Fixed

The initial defect (< > inside inline code) is fixed by applying Jean-Baptiste's patch in [r3567](#).  
Anthony, your problem seems different and your patch breaks a few tests.

#10 - 2013-08-13 17:56 - Luc Vandenbroucke

I do have about the same problem with lines starting with a space  
like this

&lt;VLAN&gt;
