Description
IBM Lotus Notes is a rich client. After installation it registers in operating system additional protocol "notes"

An URI looks like notes://SERVER/442579BB0045C177/0/250334F0B767F79B44257B8000199EEB

As normal every browser handles this URI well. After the click Lotus Notes window is opened, but in Redmine it looks like plain text in both ways.

notes://SERVER/442579BB0045C177/0/250334F0B767F79B44257B8000199EEB
[[notes://SERVER/442579BB0045C177/0/250334F0B767F79B44257B8000199EEB]]

- Subject changed from Add support for the 'notes://' protocol handler to Add support for the 'notes://' protocol handler

#5 - 2023-01-18 14:39 - Marco Shima

May this be realized in a generic way so that it's possible to configure supported protocols?

#6 - 2024-10-23 14:32 - Holger Just

- Tracker changed from Defect to Feature

- Category set to Text formatting

- Status changed from New to Closed

- Affected version deleted (2.3.1)

Only http, https and ftp links as well as email addresses are auto-linked.

You can however use other protocols when defining a regular link such as

```
"a Link":notes://SERVER/442579BB0045C177/0/250334F0B767F79B44257B8000199EEB
```

This is then rendered as

[a Link](#)
