

Redmine - Defect #14205

undefined method `default_projects_tracker_ids' on new subproject

2013-06-04 14:31 - Cezary Błajszczak

| Status: | Closed | Start date: | |
| Priority: | Normal | Due date: | |
| Assignee: | | % Done: | 0% |
| Category: | Projects | Estimated time: | 0.00 hour |
| Target version: | | Affected version: | 2.3.1 |
| Resolution: | Invalid | | |
| Description | | | |
| <p>I wanted to create new subproject and I received <i>Internal error 500</i>. I'm using latest svn build (2.3.1.stable.11918) on openSUSE 12.2 with Apache and Passenger. Here's the relevant log:</p> <pre>Started GET "/projects/new?parent_id=main" for my_ip at 2013-06-04 14:19:52 +0200 Processing by ProjectsController#new as HTML Parameters: {"parent_id"=>"main"} Current user: my_username (id=3) Completed 500 Internal Server Error in 42ms NoMethodError (undefined method `default_projects_tracker_ids' for #<Class:0xb2f2168>): app/models/project.rb:129:in `initialize' app/controllers/projects_controller.rb:73:in `new' app/controllers/projects_controller.rb:73:in `new'</pre> <p>If this helps anyhow, my redmine installation is also affected by #13903 - I did a fresh installation from svn sources and I migrated database from previous installation (2.1.2; I upgraded the db without any problems).</p> | | | |

History

#1 - 2013-06-05 22:15 - Jean-Philippe Lang

Just to make sure, did you properly restart the application after upgrading? Also, could you attach your config/settings.yml and the full output of the following command (run it from your Redmine directory):

```
ruby script/rails r -e production 'puts Setting.methods.sort'
```

Thanks.

#2 - 2013-06-05 22:15 - Jean-Philippe Lang

- Related to Defect #13903: undefined method `jsonp_enabled?' for added

#3 - 2013-06-10 10:56 - Cezary Błajszczak

- File settings.yml added

- File script.output added

I attach settings.yml - they are different than my actual redmine settings (which are read from the upgraded db). I couldn't change them, because I encountered [#13903](#).

I also attach script.output - full output of the given command.

I restarted the apache server several times, I also restarted the server itself.

#4 - 2013-06-10 19:01 - Jean-Philippe Lang

- Status changed from New to Closed

- Resolution set to Invalid

Your settings.yml is not the one provided with Redmine 2.3.1. Please, replace it with the one provided with Redmine 2.3.1 WIHTOUT MAKING ANY CHANGES, then restart.

#5 - 2013-06-11 09:31 - Cezary Błajszczak

It worked, thanks! I updated from svn to revision 11954 and switched settings.yml with the one from redmine package downloaded from RubyForge. I also no longer experience [#13903](#).
