BugTracker enhancement: allow to create a custom field for "occurs in version" - end of Life

2013-06-11 00:51 - Terence Mill

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Custom fields	Estimated time:	0.00 hour
Target version:			
Resolution:	Duplicate		
Description Summary <ul style="list-style-type: none">• new version status "archive"• custom field version without "archived" versions in list Example <p>Every bug does not only have a target version (to be fixed) but one or many (multiple selection) "occurs in version". We created a custom version field for this but have a big usability problem.</p> <p>The field drop down list grows over time so the user has to select from all versions ever created. Bugs shall be assignable to open, locked and closed version but not all closed version are still in production and shall be reported on. (e.g end of life)</p> <p>There shall be a third state called "archive" what says the version was closed and is too old now for some form selection like the custom field drop down.</p>

Well looks like the demand of this is really there with multiple issues.

But it can be achieved: (As I noted in other issue)

Basically, you can have a 'custom field' "Type" for each version. And then, when you define any other custom field (for issue or otherwise) which is of type version - it should ask for criteria as "field name" and values can be some conditions. If the field type has multiple values it can be selected which ones applies. The versions qualified under that condition will then be appeared in the corresponding version field.

Following issues have almost the same demands: Do add related
