Resolution:			**Affected version:**	2.3.1

Description

I have different group.
For group1 I display a the custom_field1once the status change to status2
For group2 I display a the custom_field1once the status change to status2

One I'm logged as group1 I can see that custom field, but if I'm logged as group2 I cannot see that field.
I'm wondering why this is happening as they have the same fields permissions.

I have also noticed that updating fields permissions for group2 is not taken into account
