Redmine - Feature #1428

More granular module permissions in projects

2008-06-12 00:24 - James Turnbull

Description

The current permissions for users at a global level are perfect but it'd be nice to be able to restrict modules at a project level. By that I mean for example in Project A that only Managers could see the Documents module (if enabled) and maybe only Developers and Members can see the Repository module. So to be able to restrict visibility of an enabled module by role.
