

Redmine - Feature #14310

Repository Management WS doesn't support authentication via X-Redmine-API-Key header

Description			
<p>I tried to keep the API key out of my access logs and thus tried to switch to the X-Redmine-API-Key for authentication against the /sys/ stuff. Loong debugging story short: It isn't supported.</p> <p>Looking at the code it shouldn't be hard to add support, I'll see what I can do.</p> <p>Basic Auth isn't possible either, that one might be a bit more complicated to add.</p>
