Description

I have Redmine 2.2.4 setup on the same server which is hosting a Subversion repository. They link up just fine and I can use the repository browser to view all of the code, but when I click on "View Revisions", they all stop sometime in May (regardless of which project I'm viewing, or when the last update was).

When looking at the repository for specific files, the "Age" column is correct. However, when I click on a particular file, the latest revision date is way too old (2 months ago for one project, when the file was updated 9 days ago).

Is there a known solution for this?
