Redmine - Patch #1433

Close statement handler in Redmine.pm

Description

I just set up Redmine.pm for svn authentication and noticed a lot of log entries like this:

DBI::db=HASH->disconnect invalidates 1 active statement handle (either destroy statement handles or call finish on them before disconnecting) at /opt/code/redmine/extra/svn/Redmine.pm line 155.

Adding $sth->finish() fixes this and authentication is still working correctly.
