

## Redmine - Defect #14388

### Pdf generation always uses latest wiki page - even if viewing older version

<b>Resolution:</b>			
<b>Description</b>			
<p>As described in subject. When hovering over the PDF text at the bottom of the wiki page the URL that displays in the bottom of the browser looks like it's going to generate the currently viewed version e.g. \$PATH/18.pdf but it goes onto use the latest revision of the wiki page. This is quite a serious fault if trying to generate approved documentation from a living wiki.</p>
