Description

It would be nice if, when referencing to a certain issue in the wiki, the issue would have a link to the wiki-page in question.

History

It could be handled with a lookup-table connecting issues and wiki-pages that os updated on saving of wiki-pages. This could actually be handled both ways, so that any wiki-pages mentioned in the comments/description of an issue could be connected the same way automatically.

This is a very good feature to have indeed.

The way the issue page shows **Associated revisions** - it can also show **Associated wikipages** block or something.

I think this feature is already build in.
If i type [[the wikipages apears in a dropdown...
