

Redmine - Patch #14402

Plugin migration directory should use plugin directory

2013-07-06 00:06 - Florian Schwab

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:	Jean-Philippe Lang	% Done:	0%
Category:	Plugin API	Estimated time:	0.00 hour
Target version:	3.1.0		
Description Currently the plugin migrate directory is fixed to "plugins/<plugin_name>/db/migrate" but the plugin API allows setting a custom directory. I attached a patch to use the plugin directory instead. Because the default value for the plugin directory is "plugins/<plugin_name>" this should be compatible with existing plugins.

Indeed, [source:/trunk/lib/redmine/plugin.rb@14359#L428](#).

[...] but the plugin API allows setting a custom directory.

Right, which is implemented in [r11766](#) and first shipped with Redmine [2.4.0](#).

I attached a patch to use the plugin directory instead. Because the default value for the plugin directory is "plugins/<plugin_name>" this should be compatible with existing plugins.

Can this little fix still be included in [3.1.0](#)?
