Target version:				
Resolution:			**Affected version:**	

Description

In order to eliminate stop errors in 'bundle install' procedure under fedora 18-19 and maybe some other distributions it is worth mentioning to install the following prerequisite packages:
yum install ruby-devel
for json gem build
and
yum install ImageMagick-devel
yum install mariadb-devel
or yum install community-mysql-devel
Not sure about mysql one, but it was stated by redhat that default mysql server will be replaced by mariadb in future releases, so it's not a big issue for me.

History

#1 - 2013-07-12 13:03 - Andrej Pakhutin

Ah. also rake and some other components installed into /usr/local/bin to where is no PATH by default

#2 - 2013-07-15 21:49 - Jan Niggemann (redmine.org team member)

- Status changed from New to Needs feedback

You could make the necessary corrections in the wiki yourself...
In case you can't, please indicate where you think this information would fit.

#3 - 2013-07-24 15:08 - Andrej Pakhutin

Done.
Added http://www.redmine.org/projects/redmine/wiki/Fedora_installation_prerequisites page
and 'Fedora' subsection on http://www.redmine.org/projects/redmine/wiki/HowTos

#4 - 2013-07-29 05:33 - Toshi MARUYAMA

- Status changed from Needs feedback to Closed
