Resolution:	Invalid	**Affected version:**	

Description

Hi,

I'm installing the new Redmine but a having some troubles.

All is good until I try to enter. The Webpage shows me that it can't find some .js, .css,... and also if I click one link (for example projects) it goes to myurl.com/projects instead of myurl.com/redmine/projects.

I assume that it's a problem of url because it needs /redmine first so I write in config/environment.rb Redmine::Utils::relative_url_root = "/redmine" and the javascript,css problems has gone but the other problem persists

I tried to fix the last problem putting #RedmineApp::Application.routes.default_scope = { :path => '/redmine', :shallow_path => '/redmine' } but it doesn't work

Anybody can help me?

Thanks in advance
Regards

- Status changed from New to Closed

- Resolution set to Invalid

No need to hack redmine, the problem lies in your webservers' (or appliaction servers') configuration.
Please post on the forums, this is not a defect in redmine, closing.
