Description <p>I have noticed an issue with automatic repository creation, if you have redmine setup to manage automatic creation of repositories using reposman.rb, then if you perform thee following steps it will fail.</p> <ol style="list-style-type: none">1. Create a project2. Create a repository inside project settings. <p>Unless you add a user with authentication credetials between step 1 and 2, the registration of the repository with redmine will fail.</p> <p>I would like to suggest that the user who creates a project, should automatically be added to the project as a manager during its creation.</p>

- Resolution set to Wont fix

I don't think that the admin who creates a project should be automatically added as a member of the project. Most of the time, he creates the projects for some users but not for himself.

If there is a bug with reposman.rb, please give the appropriate information (see [SubmittingBugs](#)) and the exact steps to reproduce.

Thanks.
