

Redmine - Defect #14526

Default Theme: Apparent strange behaviour with the main-menu when many submenus are added

2013-07-23 16:56 - Shmuel Levine

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Themes	Estimated time:	0.00 hour
Target version:		Affected version:	2.3.2
Resolution:	Duplicate		
Description			
<p>When using the Default Theme (may be true of others as well, but not yet tested), I have an issue that when plugins add many items to the main-menu, the main menu becomes unwieldly long and exceeds the width of the rest of the page.</p> <p>1) I would expect for the menu items to wrap nicely once they reach the screen width and not force me to scroll to see all of the items.</p> <p>2) To make things worse, because the overall background is white, the menu items are unreadable unless hovering over them.</p> <p>3) The issue appears to be related to the main application.css stylesheet located in public/stylesheet. #main-menu has set margin-right to be -500px. When this is removed, everything works as expected.</p> <p>-- Is there a reason for this setting in the stylesheet? It would seem to cause some major formatting issues. ---> I do not want to manually change this on my system as it would then affect any future updates... ---> I know that I can make a custom theme that just overrides this item, and I will in the interim, but this seems to me to be an issue that other would be having as well.</p>
