Description

I have a custom list, a field - with multiple values. As it has quite a bit of text, it cuts off the entire sentence when I want to create a new issue.

It would be awesome there was a way to change the width of the custom field.

History

My company is currently are using a plug-in to allow the custom fields to be multi-column wide:

https://github.com/ande3577/redmine_multi_column_custom_fields

It still works with current trunk.

Hi Bruce,

I think this was implemented in core using Long Text field with full_width_layout option.

Regards
